

Dynamic Element Test

By Thom Parker, WindJack Solutions, Inc.

This form is set up with one main subform "P1" , which automatically arranges its content from top to bottom, can grow vertically, and split into as many pages as necessary to accomodate the contents .

"P1" contains 4 subforms :

1. "DocTop" - the subform this text is written in, Has fix position content and cannot grow
2. "Header" - contains the "Header Text" , Has fix position content and cannot grow
3. "ItemSet" - contains serveral form fields, Content flows from left to right and it can grow vertically
4. "Trailer" - Last Subfrom on page, Has fix position content and cannot grow

Pressing the "New Line" button causes a new "ItemSet" Line to be created.

The "TextField" is growable in both directions. If it grows to the right too much it can cause the other items in the subform to wrap.

Header Text

<input type="checkbox"/>	Price	<input type="text"/>	<input type="checkbox"/> Discount	Cost	<input type="text"/>
